HTML File Path

A file path is the unique address of a file or directory in a computer system, indicating its exact location within the storage hierarchy.

There are mainly two type of file path

1. Absolute path
2. Relative path

Absolute path :

defines the locations of a file or directory starting from top level root

start with == / E:\Photos\Vacation\image.jpg

1. it always point to the exact location

Relative path

Relative path describe the locations of a file relative to the currently in the (current working directory)

key notations :

- . (single dot) : refers to the current folder
- .. (double dot) refres to the parent folder moving up on e level
